

Project Description

Sumer Shinde's Personal Portfolio is a three-page static website that serves as a professional homepage for me as a student at Northeastern University. The site combines a polished dark-themed landing experience with structured detail pages to give any visitor (recruiter, peer, or professor) a complete picture of Sumer's technical identity.

Goals:

Establish a credible, searchable online presence for job applications and networking

Showcase the depth and breadth of experience (4 co-ops/roles, 5 projects, 25+ courses) in one coherent place

Surface ML/CS depth via the interactive ML Concept Explorer, going beyond a static resume

Demonstrate frontend skills (for the WebDev class)

User Personas

1. The Recruiter

A technical recruiter at a mid-to-large tech company. Spends under 90 seconds on each candidate page. Scans for company names, tech stack keywords, and impact metrics. Not deeply technical but knows what "AWS," "Java Spring," and "co-op" signal. Wants confidence that the candidate can ship.

2. The Hiring Engineer

A senior SWE on an interviewing panel. Has already seen the resume. Comes to the site to go deeper, wants to understand how a project actually worked, verify that the candidate understands the algorithms they claim to know, and check for genuine curiosity. Will click the ML Concept Explorer to see if the explanations hold up.

3. The Tech Peer / CS Student

A fellow CS student or bootcamp grad, possibly referred to by a mutual connection. Curious about Northeastern's curriculum, what co-ops look like in practice, and what side projects are worth building. Uses the Courses & Hobbies page as much as the home page.

4. The Professor / Advisor

A Northeastern faculty member or academic contact who wants a quick reference on Sumer's background before a research or advising conversation. Primarily interested in coursework depth, GPA signals, and alignment with lab research areas.

User Stories

As The Recruiter,

"As a recruiter, I want to see a concise summary of Sumer's most recent work experience and tech stack at a glance so that I can decide within 60 seconds whether to move him to a phone screen."

As The Hiring Engineer,

"As a hiring engineer, I want to expand ML concept cards and read Sumer's own explanations of algorithms like PPO and Dijkstra's so that I can gauge whether his understanding is surface-level or genuine."

As The Tech Peer,

"As a CS student, I want to browse the full course table (including which courses are graduate-level) so that I can understand what a Northeastern CS+Math BS/MS path actually looks like and whether it's relevant to my own planning."

As The Hiring Engineer,

"As a hiring engineer reviewing projects, I want to see the quantified impact of each role (e.g., '\$400K saved per site,' '63% faster execution') so that I can calibrate the candidate's ability to connect engineering work to business outcomes."

As The Recruiter,

"As a recruiter, I want a direct email link or LinkedIn button on the landing page so that I can reach out immediately without hunting for contact info."

As The Professor,

"As an academic advisor, I want to view Sumer's relevant coursework in a structured table so that I can quickly identify gaps or strengths before a research-fit conversation."
